Good prices every day! Free delivery on orders over \$99! Currency Converter If the conversion above doesn't work for you, try this one instead... Representative Fob If you have a fine collection of fobs that you want to share with the world then this is the place to do it. Please send us your fob images and we will put them up for all to see. The fobs can be fob 1 or fob 2 varieties and the images will be sized accordingly. Update Comment Try out the new auction format. You can leave a comment for the auction with a Buy It Now price. If someone buys it within 24 hours then the price will adjust and that person will automatically win at the higher price.Q: How to pass data from UIScrollView to UITableViewController I am new to iphone development. I have the following scenario. I have UIScrollView and in that UIScrollView i have a UIImageView and UITableView. The size of the scroll view is equal to the size of my iphone screen. I want that the UIImageView should be at the very top of the UIScrollView with fixed width and height. So as the user scrolls down the UIScrollView, the UIImageView should be at the very top of the UIScrollView and keep moving down as the user scrolls down. When the user reaches at the end of the UIScrollView, I want the UITableView should appear. I have searched this on net but i couldn't find any tutorial that does this. I hope someone can guide me in the right direction. Thanks in advance. Regards, Ravi Kumar A: UIScrollView inherits from UIScrollViewDelegate and you can implement scrollViewDidScroll: to get notified of user scrolling. And this method can be used to move the subview with fixed height and width in the view. - (void)scrollViewDidScroll:(UIScrollView *)scrollView { CGPoint offset = scrollView.contentOffset; // offset.x - this is the content offset from the top of the scroll view. // Use it to calculate the frame of the subview you want to move 82157476af
